

Known bugs collected by GUI group

Bug	Possible source	Possible solution
Scrolling/Zooming	No scrolling feature for VisualizationViewer -> Therefore implemented by scrolling fast	No idea
When a node is inserted in L and its mapping in K is editing the code tries to change a node in R as well	TransformationComponent Private PetrinetListeners in Rule.java	Get rid of listeners and implement like "setMarking"
Add arc to rule	No idea	No idea
When loading a file twice the name is extended by "(1)". But if you save the PN to a file called e.g. "1b" it is not assoziated to this file. If you press save it looks for a file "petrinet(1)" instead of "1b" Moving node in rule	Gui FilePane	Have a look at ListEntry to File mapping on loading
Button "einmal schalten" does whatever is in the dropdown	GUI SimulationPane OneStepListener	Not that hard... Button kSchritte should stay the same
